Dedicated to Outstanding Performance and Full Operator Comfort – Mark III.

Convenience and comfort guarantee optimum performance.

In the Mark III the operator's cabin is completely separated from the machine room and outfitted with windows for unobstructed views front, rear, right, left and above. In compliance with International Standards (ISO), a cabin width of 940mm guarantees minimal operator fatigue during continuous operations. The front windshield can be stored under the ceiling for improved ventilation, and the slide door means easy boarding and exiting even in tight places.

Enjoy greater power, precision, safety and comfort.

Power, speed, durability and safety. From material handling and erection work through the full range of civil engineering tasks, the Mark III proves itself the perfect machine for most jobs. Operators working long hours in a variety of heavy operations will recognize the advantages. The Mark III offers improved comfort, greater safety and superior handling.

NOTES

- Above rated loads are based on firm level ground, within 78% of tipping load at any point 360° throughout and with front stability of 1.15 or more.
- Working radius is horizontal distance from center of rotation to a vertical line through the centerline of gravity of the load.
- The weight of the hook block and other lifting devices must be considered to be a part of the load.
 - 50 ton hook block 0.49 ton
 - 15 ton hook block 0.31 ton
 - 25 ton hook block 0.35 ton
- Crawler frame and A frame (High gantry) should also be extended before working.
- When jib boom is fitted actual loads that can be lifted with the main hook block should reduce following weights from the above chart (the weights include that of the auxiliary hook block).
- Depending on the number of part lines, rated lifting load is limited as follows:
 - 1-part line up to 5.8 tons
 - 2-part line up to 11.4 tons
 - 3-part line up to 16.0 tons
 - 4-part line up to 20.0 tons
 - 5-part line up to 25.0 tons
 - 6-part line up to 30.0 tons
 - 7-part line up to 35.0 tons
 - 8-part line up to 40.0 tons
 - 9-part line up to 45.0 tons
 - 10-part line up to 50.0 tons
- The hook block will not come down to ground level, if the rope part line is more than shown in above chart.

NOTES for JIB BOOM works

- One part line for jib hook lifting. Rated load is limited to 5.8 tons.
The weight of the hook block and other lifting devices must be considered to be a part of the load.
5.8 ton hook block ----- 0.21 ton
- Crawler frame and A frame (High gantry) should also be extended before working.
Jib boom can be used only for crane operations.
Do not use for bucket operations.
- Main boom can only be used for crane works when installed with 6.0m ~ 15.0m jib boom.
- All rated loads are based on structural strength factor.
Make sure to prevent overloading.
